

# ModPlay in Reaper

Tracks can pass through MIDI data from one insert to the next.

**Instantiate a ModPlay**  
Click on the [FX] button on a track and select ModPlay.

ModPlay is under VST3i (or FSK Audio)

**Instantiate a target plug-in**  
Click on the [Add] button and select the target plug-in.

ModPlay's MIDI output is then passed to the downstream plug-in, which can be an instrument or an effect.
