

How to assign MIDI CC

Different plug-ins and devices have different methods and capabilities for receiving MIDI CC.

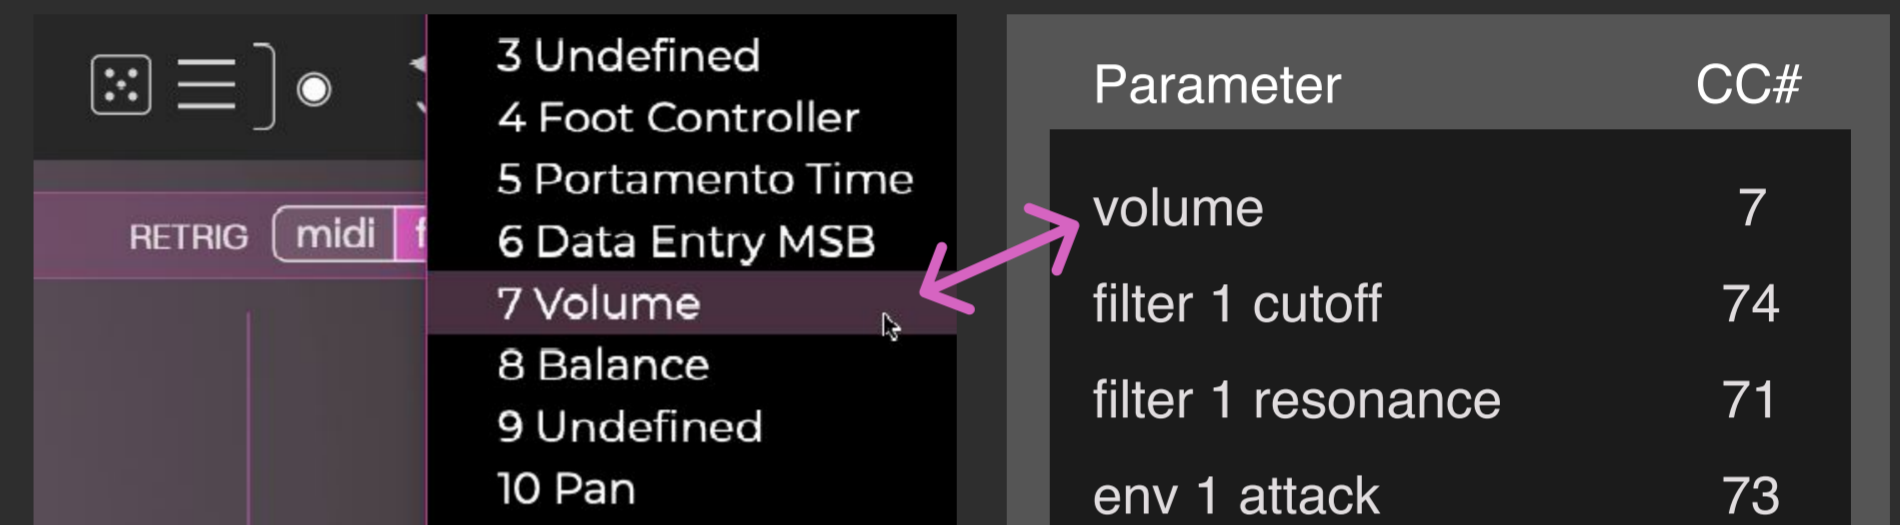

For details please refer to their documentation.

Here are a few common scenarios.

Pre-assigned Parameters

On some products, parameters may already be assigned to MIDI CC numbers.

- In this case, simply select the desired CC number on a ModPlay output.

MIDI Learn/Assign Function

This is a function available on some products that make it easy to assign MIDI CC to parameters.

This is typically a special mode where the parameter “listens” to incoming MIDI data, and assigns itself to the first MIDI CC number it receives.

- If there’s only one active ModPlay output, simply enable MIDI Learn on the target parameter.
- If there are multiple active ModPlay outputs, use the “**MIDI Assign Assist**” mode. Refer to the ModPlay User Manual for details.

MIDI Assign Assist

Manual Assignment

Some products allow for manually assigning a MIDI CC number to its parameters.

- In this case, select the same MIDI CC number for both the ModPlay output, and the parameter on the target device.
